OBJECTIVE

Cloud Engineer with 2+ years of experience in AWS, CI/CD, and Kubernetes seeking full-time roles.

EXPERIENCE

Cloud Operations Engineer

Softtek

Feb 2021 - Present

Monterrey, Nuevo León, Mx

- 50 hours saved annually by building Gitlab CI/CD pipelines to query and delivery 20 AWS and cloudability resource mapping reports.
- 20 hours saved annually by building a Gitlab CI/CD pipeline to query, delete and reuse Atlassian App's user licenses using AWS SSM documents and SQL.

Jr. Research Fellow

CONACyT

Jan 2019 - Dec 2020

Monterrey, Nuevo León, Mx

- Classification of Breast, Colon and Lung cancer histopathological images using Deep Learning and Machine Learning techniques. Project developed using Python, Pytorch, Keras, Pandas, Sci-Py and Scikit-learn, performed on Google Cloud services.
- More than 95% of accuracy for histopathological tissue images using Keras CNN.
- More than 90% of accuracy for histopathological tissue images using 5 computer vision techniques and 10 ML techniques.

EDUCATION

Master of Science MS, Computer Science, Instituto Tecnológico y de Estudios Superiores de Monterrey

Member of the Bioinformatics Research Group, CONACyT Full-ride Scholarship Award, GPA 9.6/10

Bachelor of Information Technology, Universidad de Guanajuato

Outstanding Student Award, GPA 10/10

LICENSES & CERTIFICATIONS

DevOps with Docker , University of Helsinki, Certificate ID: [56c728eb326ae](#)

Containers, K8s and Istio on IBM Cloud , IBM, Badge ID: [wlkiAn4i](#)

AZ-900: Microsoft Azure Fundamentals , Microsoft, Certiport ID: [wNJYM-2FqG](#)

AWS Certified Cloud Practitioner , AWS, Badge ID: [bef76c68e394](#)

Google Grow: Cloud Computing , Google, Certificate ID: [DS8 4NF NY8](#)

Data Scientist with Python , Datacamp, Certificate ID: [#327,424](#)

PUBLICATIONS

Histopathological Image Classification using Deep Learning (Nov, 2021) (repositorio.tec.mx)

This thesis presents a study of digital pathology classification using and combining several techniques of machine learning and deep learning.

A Further Search for Galactic Stars with Double Radio Lobes (Jun, 2017) (arxiv.org)

Here we present a further search for double-lobed radio stars in two large samples of spectroscopic stars: over 20,000 white dwarves from the Sloan Digital Sky Survey (SDSS) DR12, and 2.5 million stars from the Large Sky Area Multi-Object Fiber Spectroscopic Telescope (LAMOST).
